

SUMPRO[®]

GOLD

Overview

The Sumpro Gold is the standard in modern flood protection and is ideal for larger homes or residences that are affected by severe weather or high water intake. The Sumpro Gold series incorporates the enormous pumping capacity of a 3/4 HP heavy duty pump, a reliable back-up power supply via the fully automatic Sumpro charging unit, and the added protection of the PumpGuard control system with a primary switch override and optional dialer that will call up to nine different numbers alerting you to a flood emergency. The Sumpro Gold can either replace your existing sump pump or can be installed solely as a backup system to protect against primary pump failure, heavy water intake and power outages. The Sumpro Gold provides superior performance, dependability and peace of mind.

Patent #5,508,905

The Brains

Sumpro™ is a fully-automatic auxiliary power source that takes DC battery power and converts it into 115 VAC power to run the pump when standard power fails or is not available. The Sumpro™ uses a reliable and accurate, high efficiency charging system to manage and control the charging function. During a power emergency, the Sumpro™ will power your pumps with two deep cycle maintenance-free batteries keeping your pumps running and your basement dry between 15 and 20 hours on average. By adding extra batteries, you can double or triple the run time.

Heavy-Duty
3/4 HP AC Pump

The Muscle

The Sumpro Gold series incorporates a 3/4 HP efficient pump capable of pumping 84 gallons each per minute, at 10' of lift. The pump is ideal for use in heavy-duty sump and utility applications. Other features include an oil-cooled motor, an adjustable vertical switch and a unique compact heavy-duty design.

PumpGuard™
Control System shown
with optional phone dialer

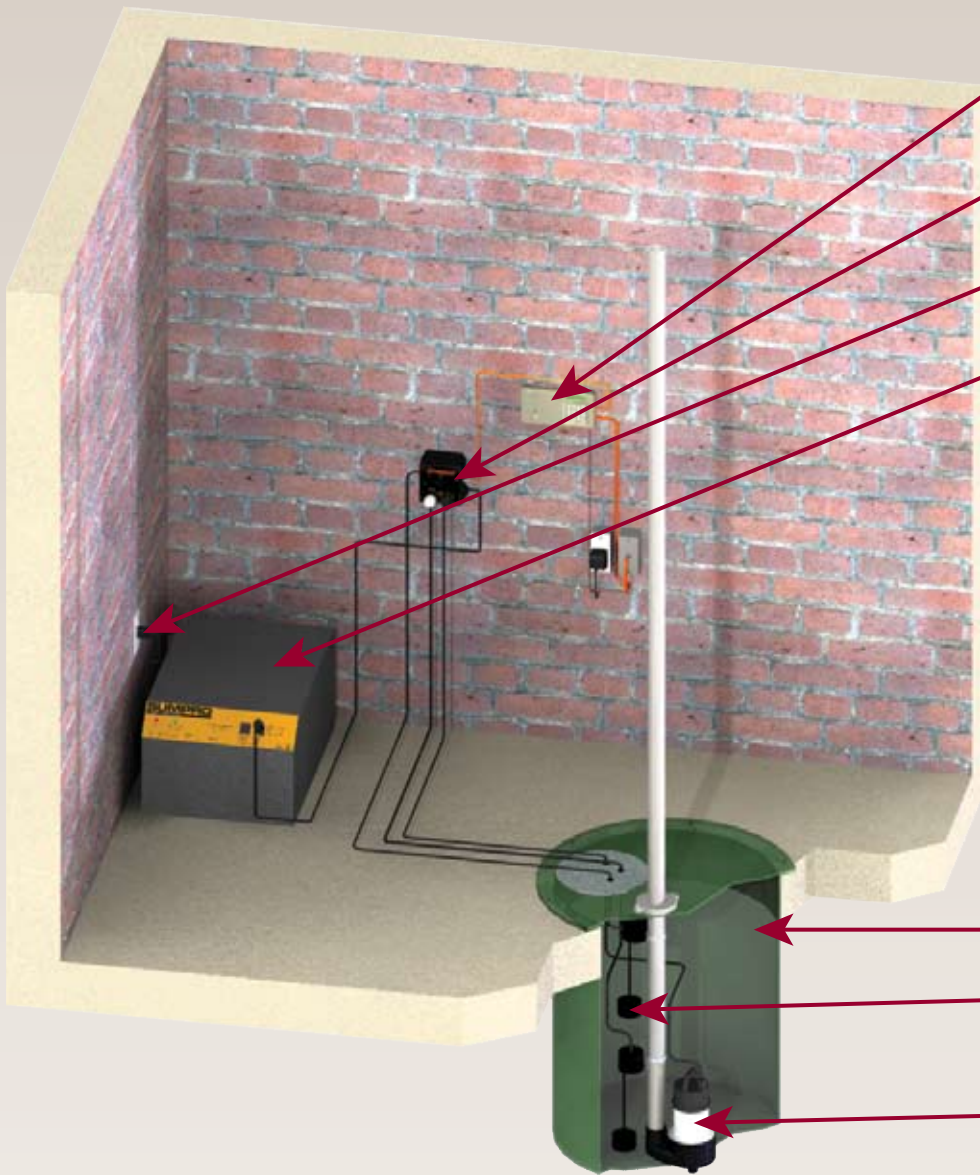

The Eyes

The PumpGuard™ is the most innovative pump protection system ever made because of its ability to eliminate the threat of flooding due to a bad pump switch. The PumpGuard features an alarm override circuit and switch that will not only sound an alarm but override your primary pump switch and run your pump if the switch fails. It is designed specifically for use with fully-automatic 115V sump or sewage pumps utilizing a two-cord piggyback switch system. Combine your PumpGuard with an optional dialer for remote alert and never worry about flooding again!

Typical Installation

- OPTIONAL DIALER
- PUMPGUARD CONTROL SYSTEM
- 115 VAC OUTLET
- SUMPRO UNIT

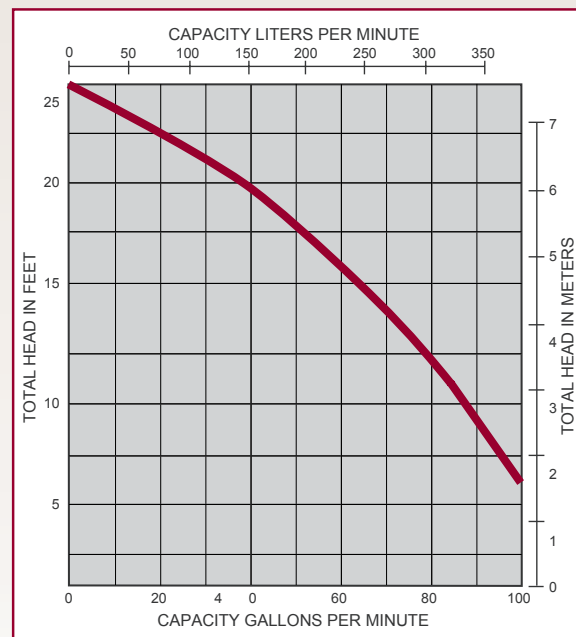

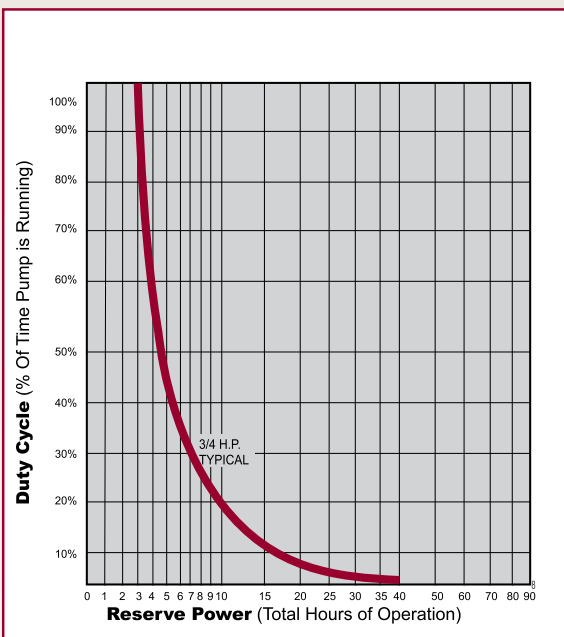

Power+ Battery

For optimal performance, install Metropolitan Industries' maintenance-free **Power+** batteries. (not included)

- BASIN
- HIGH WATER ALARM SWITCH
- 3/4 HP PUMP
